## **DECLARATION**

We hereby declare that the thesis entitled “WANDERGO (**ONLINE BUS TICKET RESERVATION**)” submitted by us, for the award of the degree of **Bachelor of Science in Computer Science** to **VIT** is a record of bonafide work carried out by us under the supervision of **Prof. S RAJKUMAR, Assistant Professor (Selection Grade)**.

We further declare that the work reported in this thesis has not been submitted and will not be submitted, either in part or in full, for the award of any other degree or diploma in this institute or any other institute or university.

Place : Vellore

**S. R. AISHWARYA (16BCS0012)**

**K. S. ABUL HASAN (16BCS0069)**

**L. ARTHI (16BCS0075)**

## **CERTIFICATE**

This is to certify that the thesis entitled “**WANDERGO (ONLINE BUS TICKET RESERVATION)**” submitted by **S R AISHWARYA** (Register No: 16BCS0012), **KS ABUL HASAN** (Register No: 16BCS0069) and **L ARTHI** (Register No: 16BCS0075), **SCOPE, VIT UNIVERSITY**, for the award of the degree of **Bachelor of Science in Computer Science**, is a record of bonafide work carried out by him under my supervision during the period, 01. 12. 2018 to 30.04.2019, as per the VIT code of academic and research ethics.

The contents of this report have not been submitted and will not be submitted either in part or in full, for the award of any other degree or diploma in this institute or any other institute or university. The thesis fulfills the requirements and regulations of the University and in my opinion meets the necessary standards for submission.

## **ACKNOWLEDGEMENTS**

First and foremost, we would like to thank our supervisor of this project, **Prof. S RAJKUMAR, Assistant Professor (Selection Grade)** for the valuable guidance and advice. He inspired us greatly to work in this project. His willingness to motivate us contributed tremendously to our project. We also would like to thank him for showing us some example that related to our project. We would like to take this opportunity to thank the **School of Computer Science and Engineering (SCOPE) of Vellore Institute of Technology (VIT)** for offering this project. Also, we would like to thank the administration of Vellore Institute of Technology (VIT) for providing us with a good environment and facilities to complete this project. It gave us an opportunity to participate and learn about the operation of various prediction algorithms.

**S R AISHWARYA (16BCS0012)**

**K S ABUL HASAN (16BCS0069)**

**L ARTHI (16BCS0075)**

## **EXECUTIVE SUMMARY**

The main objective of the **ONLINE BUS TICKET RESERVATION** is to manage the details of **Bus, Tickets, Agent, Seats**. It manages all the information about **Bus**. The project is totally built at administrative end and thus only the administrative is guaranteed the access. The purpose of the project is to build an application program to reduce the manual work for managing the Customer Booking. It tracks all the details about the booking, agents, seats.

OBTR	Online Bus Ticket Reservation
TNSCT	Tamil Nadu State Transport Corporation Limited

# 1. INTRODUCTION

There was a time when people used to waste their valuable times just to get a piece of information. Now the technology is more advance then compare to any previous times. One of the blessings of technology is web application/ web site. It allows users to interact with the system from anywhere as long as they are connected to the internet.

**WANDERGO** is an online site which dealt with bus ticket reservation. In conventional method they do paper works for keep their customer's details and booking reservation records. If any customer, he/she might needs to reserve seat he/ she need to call them or walk in to their counter which take much time. Sometimes the phone line also keeps busy and customers unable to reserve seats for them. Besides, they need to keep records of the payments made by customers in papers and quite impossible for them to keep track on payment issues. It consumes more time for both passenger and travel managers. Our project makes easy way for booking which saves time for both passengers and travel managers which is entirely online based. So we implemented an online site for bus ticket booking which will be easier for customers to book tickets wherever they are.

"**WANDERGO**" which is completely a web based site, as we know currently internet occupies everywhere, so our Wandergo will surely help users to book the bus ticket and additionally our site provides bus detail to book buses for tour, industrial visit, pilgrim tour through online instantly.

Our site makes user to signup and saves their data into a local server, while login it validates the entered data to the stored data. If the data are same, it displays home page of our site. Now user can search the buses by entering the details of the journey and now they can book their convenient seats. We provide softcopy of their journey details.

---

## **1.1 OBJECTIVE**

The main purpose of this study is to automate the manual procedures of reserving a bus ticket for any journey made through Tamil Nadu State Transport Corporation Limited (TNSTC). This system is said to be an automatic system and customers can select seats by themselves. Specifically, objectives of this project will consist of:

Providing a web-based bus ticket reservation function where a customer can buy bus ticket through the online system without a need to queue up at the counter to purchase a bus ticket. Enabling customers to check the availability and types of busses online. Customer can check the time departure for every TNSTC bus through the system. Ability of customers to cancel their reservation. Admin user privileges in updating and canceling payment, route and vehicle records.

## **1.2 MOTIVATION**

It is an Web based application “Online Bus Ticket Reservation System”. It is used in a bus transportation system, a facility which is used to reserve seats, cancellation of reservation and different types of route enquiries used on securing ,quick reservations

## **1.3 BACKGROUND**

The website which has online payment functions. So that it will be easier for customers to pay online rather than going to the counter and by cash. Customers will be able to see the available bus depending on the schedule they select along with the price.

## **1.4 BENEFITS**

The system having online payment functions. So that it will be easier for customers to pay online rather than going to the counter and by cash.

Customers will be able to see the available bus depending on the schedule they select along with the price.

As the system having online transaction it will not save the customer's credit or debit details like card numbers, expiry dates and cvv code for security issues while purchasing or reserving the seats.

The system will be available for 24 \* 7 .Customers need not to go to the counter and purchase tickets

## **1.5 DISADVANTAGES**

The system will not allow customers to refund at percent.

Some times sever issues

System will not support any offline data accessibility.

## **2. PROJECT DESCRIPTION AND GOAL**

The Bus ticket reservation system is currently maintaining the project Transport Company's process manually which is a very time consuming process. The main goal of the system is, easy ticket booking and transport maintenance, The bus ticket booking system not only deals with transporters owned vehicles but also takes into consideration about the other types project of system transport vehicles available with other transporters .

## **3. TECHNICAL SPECIFICATION**

### **3.1 SYSTEM REQUIRMENTS**

A system requirement consists of hardware and software as follows.

#### **3.1.1 HARDWARE REQUIRMENTS**

Hardware required to design this system are as follow:

- INTEL Pentium Processor
- 150 MB of free hard-drive space
- 128 MB of RAM

### **3.1.2 SOFTWARE REQUIRMENTS**

Software required to design this system are as follow:

- Operating System: Windows (7 or above)
- Web Browser: Google Chrome
- Software tools: Notepad++, Brackets, XAMP (V3.2.2)

### **3.2 SOFTWARE TOOL USED**

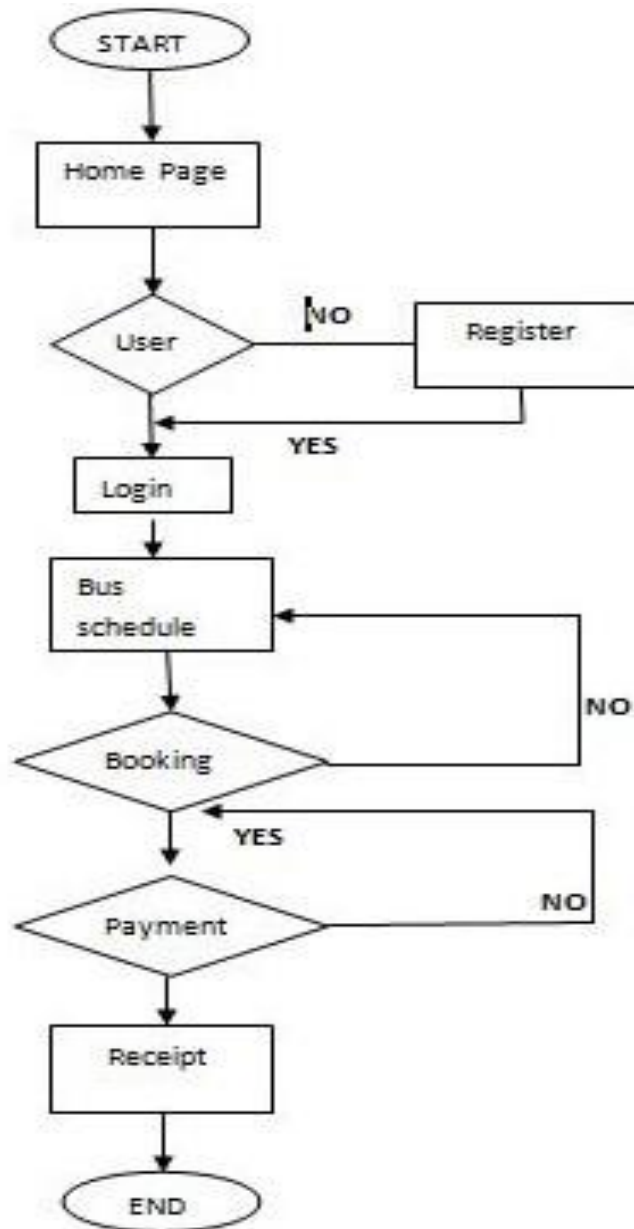

We have used xampp sever as a local server for storing user database. **XAMPP** is a free and open-source cross-platform web server solution stack package developed by Apache Friends, consisting mainly of the Apache HTTP Server, MariaDB database, and interpreters for scripts written in the PHP and Perl programming languages. Since most actual web server deployments use the same components as XAMPP, it makes transitioning from a local test server to a live server possible.

XAMPP's ease of deployment means a WAMP or LAMP stack can be installed quickly and simply on an operating system by a developer.

We used Notepad++ and Brackets tools for coding our project this tools are very easy to use while comparing with other tools

#### 4. DESIGN APPROACH AND DETAILS

##### FLOWCHART:

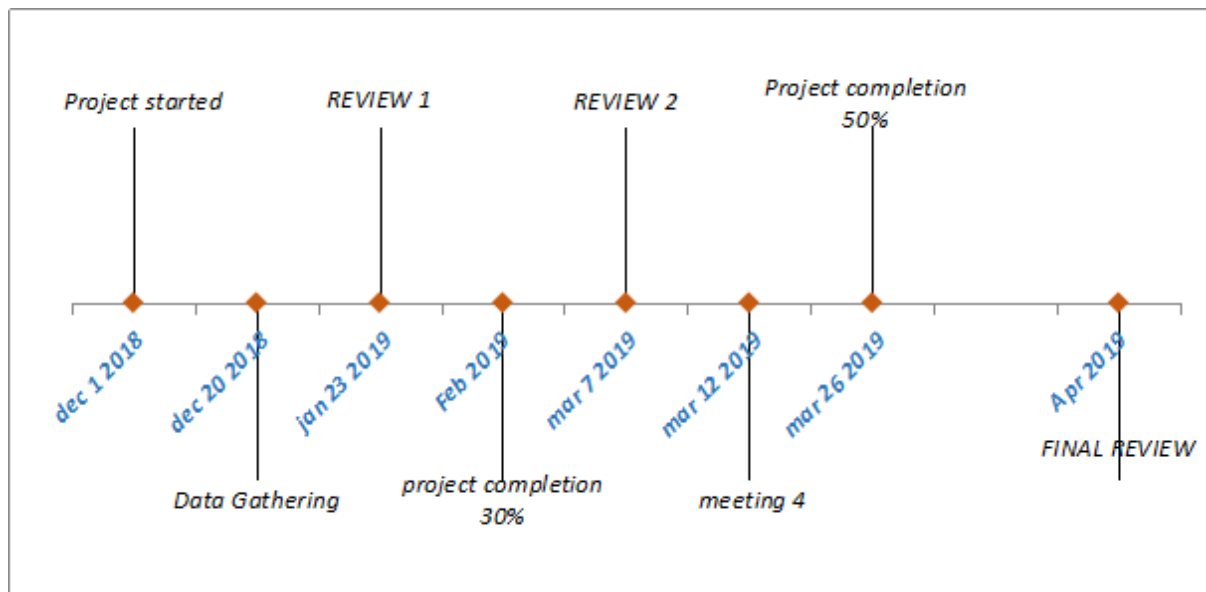

## SYSTEM ARCHITECTURE:

## 5. SCHEDULE, TASKS AND MILESTONES

## 6. PROJECT DEMONSTRATION

### 6.1 DATABASE

For our project, we have used end user's user name, email, password and it is stored in database. We also used sql queries to insert into the database and fetch from it.

## 6.2 SCREENSHOTS OF CODING AND RESULT:

### SIGN UP:

This page is providing the form that will be asking users to enroll which makes them to login later for easy buy process.

ABOUT US:

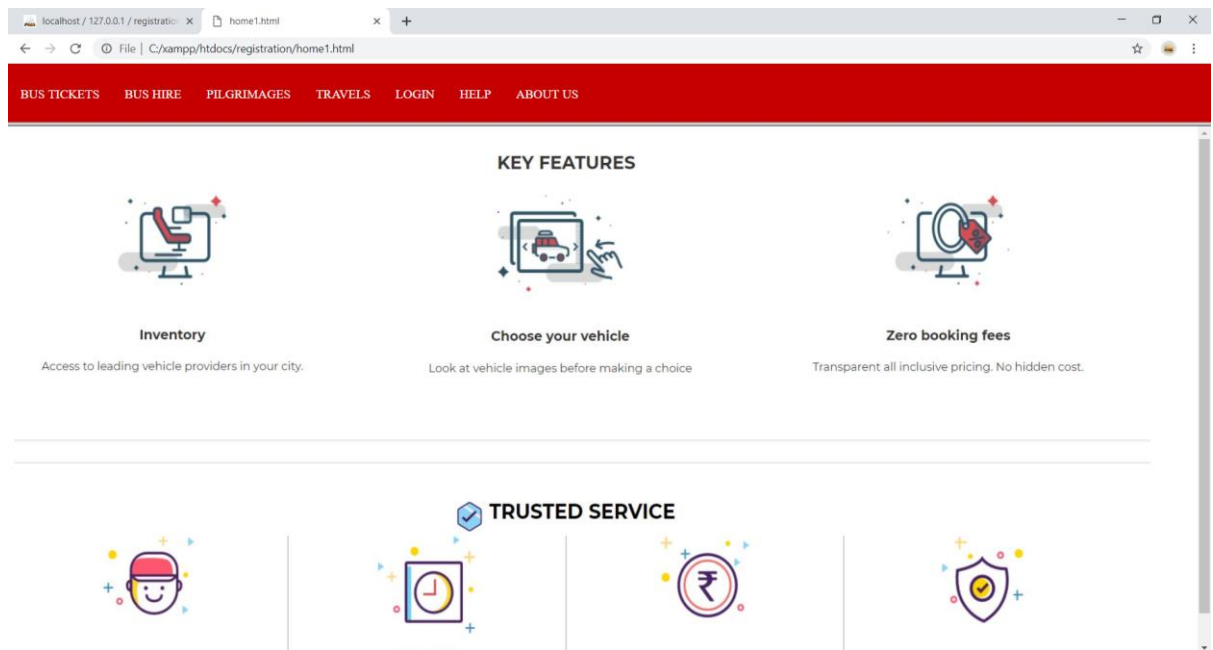

<html>

<body>

</body>

</html>

### **6.3 FUNCTIONALITY:**

The details of the buses, Price list, and Employee details are to be maintained and controlled . Also first the user needed to login first in order to perform the booking actions. Calculations of the charges are to be implemented. The details of the buses and seats available are to be maintained and can be updated regularly , Booking form and the pricing list are to be maintained in separate pages. There should be new update, cancel and search options available

### **6.4 NON -FUNCTIONALITY:**

Functional requirements defines the needs in terms of performance logical database requirements, design constraints, standards compliance, reliability, availability, security, maintainability and as well as portability

## SUMMARY

From our study Online Bus Ticket Reservation System is Windows based application that works within centralized network. The software program Online Ticket Reservation System provides bus transportation system, a facility to reserved seats, cancellation of seats, and different types of enquiry which need an quick and instant reservation. OBTRS is built for managing and computerize the traditional database, ticket booking, tracking bus and travel made easy. It maintains all data of users, bus details, reservation details, booking details and customer details.
